Vinicius Meier Trevisan | Curitiba, Paraná, Brazil

Software Engineer | Backend & AI Systems | TypeScript, NestJS, Node.js, Python

+55 (41) 99122-1573 | vinimtrevisan@gmail.com | LinkedIn | GitHub | Portfolio

Backend-focused Software Engineer building production AI/RAG platforms, workflow automation, integrations, and cloud products. Strongest in TypeScript/NestJS and Python/FastAPI, with end-to-end ownership through CI/CD.

Experience

Software Engineer | WOW Lavacar — Curitiba, PR **May 2026 — Present**

- Architected and built a provider-agnostic AI platform (NestJS + Angular) serving 80+ users and 140+ conversations/day, with RAG over Notion/PDF/DOCX knowledge bases, tool calling with human confirmation, versioned agents, rollback, and per-run auditing.
- Built a native workflow engine to replace Pipefy; migrated 18 low-code automations to TypeScript, cutting latency from 1,628ms to 249ms and requests per webhook from 5 to 1, plus bidirectional reconciliation that fixed 170+ diverging cards.
- Implemented end-to-end NFS-e issuance across 4 codebases and 14 locations, reducing issuance time by 90%+; A1 certificates are processed in memory only, and one upload covers the entire CNPJ root.
- Architected Google OAuth end-to-end (NestJS + FlutterFlow), now used by 80%+ of logins, with a 10-minute JWT bridge and conflict guard preventing account takeover.
- Shipped a 5-type discount-campaign engine replacing Voucherify (US$650/month), an in-house contract-signing system with audit trail replacing ClickSign (R$179/month), and a multichannel complaints hub integrating Instagram, Google, and Reclame Aqui with AI triage.

Software Engineer Intern | Vivo (Telefônica Brasil) — Curitiba, PR **Sep 2025 — May 2026**

- Reduced historical query latency by 99% for 1,200+ technicians by building a monitoring dashboard with Next.js + FastAPI, Rust-based parsers, and multi-level RAM/Parquet caching.
- Engineered modular Python/Pandas ETL pipelines with atomic SQL swaps to unify B2B/B2C data, processing 800k+ records/month with zero downtime and 100% accuracy.

Selected Projects

Alyra — *React Native (Expo)* | *FastAPI* | *PostgreSQL* | *Cloud Run* | *OpenAI*

- Architected and built a complete iOS/Android product with Google Calendar sync, split expenses, private media storage, native widgets, RevenueCat subscriptions, and Google/Apple sign-in with TOTP 2FA.
- Designed an AI assistant that operates the entire app through natural language using 55 tools, with mandatory confirmation for destructive actions and a deterministic fallback path.
- Deployed the serverless backend on Cloud Run with GitHub Actions + OIDC, canary releases, smoke tests, and automatic rollback.

Kybernus — *Node.js* | *TypeScript* | *Docker* | *Terraform* | *Gemini AI*

- Built an open-source CLI that generates production-ready projects with authentication, Docker, Terraform, and Stripe in under 60 seconds across 5+ frameworks and 3 architectures: Hexagonal, Clean, and MVC.
- Reached 40+ GitHub stars and adoption by 100+ developers in the first month, validating the tool with real external usage.

Vanguarda Core Banking — *Java 21* | *Spring Boot 3* | *AWS* | *PostgreSQL* | *Redis* | *RabbitMQ*

- Engineered Redis-based idempotency, a double-entry ledger, and distributed locking with Redlock + PostgreSQL SERIALIZABLE for consistent money transfers under concurrency.
- Validated the system with 56 automated tests, including 100 concurrent threads with zero balance corruption; provisioned AWS infrastructure with Terraform and CI/CD.

Core Skills

Backend: TypeScript, Node.js, NestJS, Python, FastAPI
Frontend: React, Next.js, Angular, React Native (Expo)
Data & Cloud: PostgreSQL, Redis, Docker, AWS, GCP, Terraform, CI/CD
AI & Testing: RAG, Tool Calling, AI Agents, OpenAI/Gemini APIs, Jest, Pytest, Playwright
Languages: Portuguese (Native), English (Fluent)

Education

B.Sc. Software Engineering — Pontifícia Universidade Católica do Paraná (PUCPR) | 2024–2028
High School Diploma (Exchange Program) — Layton Christian Academy, Utah, USA | 2023–2024
