Vinicius Meier Trevisan

Software Engineer — Backend, Distributed Systems & Applied AI

Curitiba, Brazil | +55 (41) 99122-1573 | vinimtrevisan@gmail.com | linkedin.com/in/vinicius-meier-trevisan
github.com/ViniMTrevisan | portfolio-vinimtrevisan.vercel.app

Backend-focused Software Engineer building production AI/RAG platforms, workflow automation and financial integrations. Strongest in TypeScript/NestJS and Python/FastAPI, with end-to-end ownership from schema design to CI/CD. Comfortable with the constraints that come with money, concurrency and data that cannot be wrong.

EXPERIENCE

Software Engineer — WOW Lavacar · Curitiba, Brazil **May 2026 — Present**

- Architected a provider-agnostic AI platform (NestJS + Angular) serving 80+ users and 140+ conversations/day, with RAG over Notion/PDF/DOCX knowledge bases, tool calling with human confirmation, versioned agents, rollback and per-run auditing.
- Built a native workflow engine to replace Pipefy, migrating 18 low-code automations to TypeScript and cutting latency from 1,628ms to 249ms and requests per webhook from 5 to 1; bidirectional reconciliation fixed 170+ diverging cards.
- Delivered end-to-end NFS-e invoicing across 4 codebases and 14 locations, reducing issuance time by 90%+; A1 certificates are handled in memory only and one upload covers the entire CNPJ root.
- Architected Google OAuth end to end (NestJS + FlutterFlow), now used by 80%+ of logins, with a 10-minute JWT bridge and a conflict guard preventing account takeover.
- Shipped a discount-campaign engine replacing Voucherify (US$650/month), an in-house contract-signing system with audit trail replacing ClickSign (R$179/month), and a multichannel complaints hub (Instagram, Google, Reclame Aqui) with AI triage.

Software Engineering Intern — Vivo (Telefônica Brasil) · Curitiba, Brazil **Sep 2025 — May 2026**

- Reduced historical query latency by 99% for 1,200+ technicians by building a monitoring dashboard with Next.js, FastAPI, Rust-based parsers and multi-level RAM/Parquet caching.
- Engineered modular Python/Pandas ETL pipelines with atomic SQL swaps to unify B2B/B2C data, processing 800k+ records/month with zero downtime and 100% accuracy.

Founder & Freelance Developer — Nex Solutions · Remote **Nov 2025 — Present**

- Deliver web products and AI automations for small businesses with Next.js, TypeScript and Python, including a full rebrand and high-conversion landing page for Fábrica das Cópias.

SELECTED PROJECTS

Alyra — React Native (Expo), FastAPI, PostgreSQL, Cloud Run, OpenAI

- Built an iOS/Android product with Google Calendar sync, split expenses, private media storage, native widgets, RevenueCat subscriptions and Google/Apple sign-in with TOTP 2FA.
- Designed an AI assistant that operates the whole app in natural language through 55 tools, with mandatory confirmation for destructive actions and a deterministic fallback path.
- Deployed the serverless backend on Cloud Run with GitHub Actions + OIDC, canary releases, smoke tests and automatic rollback.

Kybernus — Node.js, TypeScript, Docker, Terraform, Gemini AI

- Built an open-source CLI that generates production-ready projects with authentication, Docker, Terraform and Stripe in under 60 seconds across 5 frameworks and 3 architectures (Hexagonal, Clean, MVC).
- Reached 46 GitHub stars and adoption by 100+ developers in the first month, validating the tool with real external usage.

Vanguarda Core Banking — Java 21, Spring Boot 3, AWS, PostgreSQL, Redis, RabbitMQ

- Engineered Redis-based idempotency, a double-entry ledger and distributed locking with Redlock + PostgreSQL SERIALIZABLE for consistent money transfers under concurrency.
- Validated with 56 automated tests, including 100 concurrent threads with zero balance corruption; provisioned AWS infrastructure with Terraform and CI/CD.

CORE SKILLS

Backend: TypeScript, Node.js, NestJS, Java (Spring Boot), Python (FastAPI), REST
Frontend: React, Next.js, Angular, React Native (Expo), Tailwind CSS
Data & Cloud: PostgreSQL, MongoDB, SQL Server, Redis, RabbitMQ, Docker, AWS, GCP, Terraform, CI/CD
AI & Testing: RAG, tool calling, AI agents, OpenAI/Gemini APIs, Jest, Pytest, Playwright
Languages: Portuguese (native), English (fluent)

EDUCATION

B.Sc. Software Engineering — Pontifícia Universidade Católica do Paraná (PUCPR) 2024 — 2028
High School Diploma (Exchange Program) — Layton Christian Academy, Utah, USA 2023 — 2024
